

Thirsty Thursday: Got (glass-bottled) Milk?

Typically, milk containers are not easy to reuse or recycle, whether it is a plastic jug made of high density polyethelene, or a carton made from cardboard and plastic layers. Instead, **choose to buy your milk in reusable and infinitely recyclable glass bottles.** These nostalgic yet progressive containers often have a one-time deposit at first purchase, but when you return with the bottle, your gallon of milk is comparable in price to the milk in a non-reusable container.

If you're in Massachussetts, check out Hornstra Farms, which delivers glass-bottle milk across Southeast MA, or for raw milk, check out [Paskamansett Farms](#) in Dartmouth, MA.
